Response to Technical Check

To: The Editorial Office, BMC Anesthesiology

Date: 2026-10-22

Manuscript ID: 33143338-6116-44cb-8391-60246182cf81

Manuscript title: Prediction of intraoperative hypotension exposure from data available at anaesthesia induction: development and internal validation in MOVER/SIS with an external transportability check in VitalDB

Manuscript type: Original Article

Corresponding author: Yongxin Yang, 960856791@qq.com

Dear Editorial Office,

Thank you for the technical check of our manuscript (Manuscript ID: 33143338-6116-44cb-8391-60246182cf81). We provide below a point-by-point response to the item(s) raised, and we have re-submitted the revised manuscript (v1.0) accordingly.

Point 1 — Clinical Trial Number

Query (verbatim): Please provide a Clinical Trial Number in the manuscript. If not applicable, please state the following in the manuscript: "Clinical trial number: not applicable."

Response: We have added the statement verbatim to the Declarations section of the manuscript, immediately after "Consent for publication":

Clinical trial number: not applicable.

This study is a retrospective analysis of pre-existing, de-identified databases (MOVER/SIS and VitalDB); no clinical trial was registered or conducted, so a Clinical Trial Number is not applicable. No other changes were made to the manuscript text, in accordance with the instruction not to alter anything else in the manuscript.

We confirm that all other manuscript metadata — the ethics statement, data availability, competing interests, funding, and the use-of-artificial-intelligence declaration — remain exactly as previously submitted and are consistent with the declarations provided in the submission system.

Thank you for your time and for facilitating the review process. Please let us know if any further information is required.

Sincerely,

Yongxin Yang
